

Erosion Guard

Don't Let Center Pivot Wheel Ruts Slow You Down

Protect your fields from center pivot wheel track ruts with **EROSION GUARD** - a simple, low cost solution that binds soil particles together and helps minimize soil clumping and wheel ruts throughout the entire season.

Guaranteed Analysis

Sodium Acrylate/Acrylamide Copolymer	97.0%
Inert Ingredients	0.3%

How Erosion Guard Works

EROSION GUARD LOGS™ are bags filled with soil stabilizing polymers that bring soil particles together and help create a firmer path for wheels to roll on.

How to Use Erosion Guard

Installation is easy. Simply hang one EROSION GUARD LOG from each irrigation tower, turn sprinklers on and the water will dissolve and disperse polymers into the soil. Just one 5 lb EROSION GUARD LOG per tower lasts all season long.

The Erosion Guard Advantage

EROSION GUARD helps growers optimize their center pivot irrigation investment by:

- Reducing equipment wear and tear, and maintenance
- Minimizing sprinkler and wheel jams that occur in wheel ruts
- Reducing soil compaction and clumping, making it easier for wheels to move
- Lowering disease potential by reducing the amount of water that pools in wheel ruts

EROSION GUARD LOGS is a registered trademark of D & D Ag LLC.
