

Nematode Program

March - November Spray Program

The correct combination of nutrients produces outstanding greens and tees. It also helps turf build up its natural defenses allowing it to better withstand pest and disease pressure, including nematodes. BRANDT's proprietary foliar nutrient blends build stronger root systems, stronger shoots and healthier turf.

Application Timing	Products	Application Rates
March - November	NEO-TEC® S.O.	3 oz/1000 sq ft, once a month
May - June	BRANDT PLANT START	3 oz/1000 sq ft, once a month
July - October	MANNI-PLEX® TOTAL TURF BRANDT SEAWEED MAX	3 oz/1000 sq ft, once a month

Products may be applied every other week instead of monthly, just split application rate in half. One turn of irrigation head is necessary to remove NEO-TEC® S.O. off blades of grass. If nematodes are present when you are starting the program, apply 6 oz/1000 sq ft of NEO-TEC® S.O. for the first two months, then apply at 3 oz/1000 sq ft once a month for remainder of the season. Do not use NEO-TEC® S.O. with surfactants and watch the amount of water (rain, irrigation, spray volume). Too much water will void the NEO-TEC® S.O. application.

Guaranteed Analysis

MANNI-PLEX® TOTAL TURF	4-0-0 plus 1.2% Mg, 2.8% Fe, .5% Mn, .6% Zn
NEO-TEC® S.O.	70% sesame oil, 30% other ingredients, lecithin and water
BRANDT PLANT START	8-27-2 plus plant hormones, amino acids, vitamins and anti-stress substances
BRANDT SEAWEED MAX	25% Seaweed Extract derived from Ascophyllum Nosodium, 1% Humic Acid
