

Manni-Plex® for Beans

Advanced Foliar Nutrition

MANNI-PLEX FOR BEANS is a proprietary foliar supplement that provides highly mobile and available zinc, manganese, iron, boron and molybdenum to plant growing points. It is an excellent tool for preventing and correcting nutrient deficiencies, and enhancing overall plant health.

Applying MANNI-PLEX FOR BEANS during the growing season helps ensure that adequate levels of Zn, Mn, Fe, B and Mo are present.

MANNI-PLEX® FOR BEANS Advantages

- More efficient than other forms of Zn, Mn, Fe, B and Mo
- Low molecular weight and particle form allows more nutrients to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Zinc is essential to root formation, as well as leaf and shoot development
- Iron and Manganese help strengthen the plant's immune system and natural defenses
- Manganese is critical to photosynthesis, nitrogen metabolism and carbohydrate utilization.
- Boron and molybdenum help promote nitrogen metabolism, fruit and flowering; as well as pod set and pod fill in soybeans.

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

2-0-0

Total Nitrogen (N)	2.00%
1.75% Nitrate nitrogen	
0.25% Urea nitrogen	
Boron (B)	0.20%
0.20% Water soluble boron	
Iron (Fe)	0.30%
0.30% Water soluble iron	
Manganese (Mn)	3.20%
3.20% Water soluble manganese	
Molybdenum (Mo)	0.01%
0.01% Water soluble molybdenum	
Zinc (Zn)	2.10%
2.10% Water soluble zinc	

Derived from urea, sodium borate, iron nitrate, manganese nitrate, sodium molybdate and zinc nitrate.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 1-2 quarts per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur. For pre-plant or sidedress applications, use 1-2 gallons per acre.

Ornamental Crops: Apply 1-2 quarts per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
