

Manni-Plex® Ni

Advanced Foliar Nutrition

MANNI-PLEX NI is a proprietary foliar supplement that provides highly mobile and available nickel to plant growing points. It is an excellent tool for preventing and correcting nickel deficiencies, and enhancing overall plant health.

Nickel deficiencies are common in pecans, as well as vineyards and orchards. Applying MANNI-PLEX NI during the growing season helps ensure that adequate levels of nickel are present. It may also help prevent nickel deficiency related disorders such as Mouse Ear, Orchard Replant Disease; and help reduce the incidence and severity of scab.

MANNI-PLEX® Ni Advantages

- More efficient than other forms of Ni
- Low molecular weight and particle form allows more Ni to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Nickel is an essential nutrient that plays a key role in plant metabolism and the plant's ability to fight disease.

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

7-0-0

Total Nitrogen (N)	7.0%
2.0% Nitrate nitrogen	
5.0% Urea nitrogen	
Nickel (Ni)	5.0%
5.0% Water soluble nickel	

Derived from nickel nitrate and urea.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 8-16 fl. oz. per acre per application throughout the growing season. At least 3 applications are recommended. More frequent applications at 8 oz. per acre may be needed to correct deficiencies once they occur.

Ornamental Crops: Apply 8-16 fl. oz. per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
