Z-mendit™

# Z-mendit™

## Guaranteed Analysis

Soil Amending Ingredients	
Zeolite (Clinoptilolite) Ore.....	100%

## Suggested Use:

### Flower Beds:

Apply Z-mendit™ to any soil. Apply approximately 10% by volume to the soil in the areas where plants will be. Mix Z-mendit™ into the existing soil with a rake or rototiller. For a three inch deep root zone use 150 pounds per 100 Ft<sup>2</sup> (610kg/100 M<sup>2</sup>).

### Trees and Shrubs:

Mix 10% to 20% of Z-mendit™ by volume in the backfill for the shrub or tree. Blend the Z-mendit™ with backfill soil, peat or other materials used for filling the root ball hole.

### Turf Top Dressing:

Apply Z-mendit™ to existing turf. Best results will be obtained if Z-mendit™ is worked into the root zone via aerification, drill and fill, Dry-jecting™ or other method. Normal application is 275 to 500 lbs per 1000 Ft<sup>2</sup> (120-245 kg/100 M<sup>2</sup>) with aerification or other procedure to enhance placement into the root zone.

### Turf - New Construction:

Z-mendit™ will enhance establishment of seed, sprigs or sod. Apply at least 5% by volume to top 6" (15 cm). Recommended rate is 10% - 15% by volume. Blend with sand prior to placement or lay out a grid of known size and apply the appropriate amount to each grid. Blend with rake or rototiller then proceed with seeding, sprigging or sodding.

### Divot Mix:

Mix Z-mendit™ with divot mix for a 50% Z-mendit™ 50% sand ratio to enhance germination and moisture and nutrient retention capabilities.
