## Z-mendit

NET WEIGHT 50 LBS. (22.68 KG)

# 

#### **Guaranteed Analysis**

Soil Amending Ingredients Zeolite (Clinoptilolite) Ore......100%

### Suggested Use:

#### **Flower Beds:**

Apply Z-mendit<sup>™</sup> to any soil. Apply approximately 10% by volume to the soil in the areas where plants will be. Mix Z-mendit <sup>™</sup> into the existing soil with a rake or rototiller. For a three inch deep root zone use 150 pounds per 100 Ft<sup>2</sup> (610kg/100 M<sup>2</sup>).

#### **Trees and Shrubs:**

Mix 10% to 20% of Z-mendit<sup>™</sup> by volume in the backfill for the shrub or tree. Blend the Z-mendit<sup>™</sup> with backfill soil, peat or other materials used for filling the root ball hole.

#### **Turf Top Dressing:**

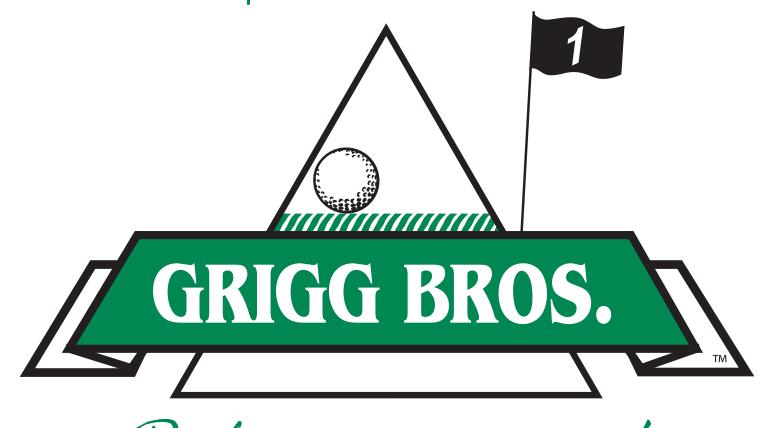

Apply Z-mendit<sup>™</sup> to existing turf. Best results will be obtained if Z-mendit<sup>™</sup> is worked into the root zone via aerification, drill and fill, Dry-jecting<sup>™</sup> or other method. Normal application is 275 to 500 lbs per 1000 Ft<sup>2</sup> (120-245 kg/100 M<sup>2</sup>) with aerification or other procedure to enhance placement into the root zone.

#### **Turf - New Construction:**

Z-mendit<sup>™</sup> will enhance establishment of seed, sprigs or sod. Apply at least 5% by volume to top 6" (15 cm). Recommended rate is 10% -15% by volume. Blend with sand prior to placement or lay out a grid of known size and apply the appropriate amount to each grid. Blend with rake or rototiller then proceed with seeding, sprigging or sodding.

#### **Divot Mix:**

Mix Z-mendit<sup>™</sup> with divot mix for a 50% Z-mendit<sup>™</sup> 50% sand ratio to enhance germination and moisture and nutrient retention capabilities.
