

BRANDT GlucoPro

Cantaloupe Trial

12.3% increase in fruit weight (0.6 lb) over the check

BRANDT GlucoPro increased cantaloupe fruit weight with statistical significance by an average of **12.3%** over the untreated check, and showed a statistically significant brix advantage of over **1 point**.

Trial Parameters

Year	2014, Tonopah, AZ
Treatments	1. Untreated Check 2. BRANDT GlucoPro 6.6 oz/ac, 2 foliar applications

Trial Results

Fruit Weight (lbs)	12.3% Increase
BRANDT GlucoPro	4.9
Check	4.3
Brix (%)	1 Point Increase
BRANDT GlucoPro	13.9
Check	12.8

Application Recommendation For Cantaloupe

Make foliar or soil applications at 6-10 fl oz per acre; first application at early bloom, then 1-2 more applications on 2 week intervals as needed. For melons and watermelons, apply again 2-3 weeks before harvest.

Foliar or Drip Application 1

6-10 oz/ac
at early bloom

Foliar or Drip Application 2

6-10 oz/ac
at late fruit sizing,
2 weeks pre-harvest
